Profile

Senior Software Engineer with 8+ years building high-performance services, distributed systems, and AI/agent tooling across fintech and applied AI. Known for turning ambiguous constraints into measurable outcomes: cutting infrastructure cost 50–90%, collapsing 12-month migration timelines to 3 months, and shipping zero-downtime cutovers for tier-1 banking. Owns reliability end-to-end — SLOs, on-call, and event-driven service design — with deep expertise in Rust, TypeScript, and agentic systems.

Core Competencies

Rust / Go	LLMs / AI Agents / RAG	Docker / Kubernetes	CI/CD / GitHub Actions
TypeScript	MCP / Tool-Calling	AWS (EC2, S3, API GW)	SLOs / Observability
Distributed Systems	GraphQL / REST	PostgreSQL / MongoDB	Playwright / Appium
Event-Driven / Queues	WebSockets / WebRTC	Neo4j / PostGIS	Dynatrace

Work Experience

Software Engineer

Mar 2025 – Present

Presight AI · Abu Dhabi

- Designed event-driven agent pipelines (LLM + MCP + tool-calling) over async job queues, automating operational work and legacy migration — **40%** less manual engineering effort.
- Owned service SLOs and on-call for inference-facing backends (Rust / NestJS) on Docker/Kubernetes; held **99.9%+** production uptime.
- Decoupled product squads with a micro-frontend deployment boundary, cutting release cycle time by **60%**; React/Next.js + WebSockets/WebRTC for live inference streams (**500+** concurrent users per instance).

Tech: Rust · Go · Node.js · NestJS · TypeScript · GraphQL · Docker · Kubernetes · LLMs · MCP · React · Next.js

Software Engineer

Apr 2024 – Jan 2025

D4 Insight · Dubai

- Replaced a Java service-discovery stack with Rust (Axum/Tokio) after profiling showed **70%** CPU lost to GC; p99 latency **300ms** → **sub-50ms**, replicas **6** → **3**, hosting cost halved.
- Built a Rust HTTP reverse proxy for high-concurrency routing (**10,000+** connections) and wired event-driven traffic fan-out with bounded queues and backpressure.
- Defined SLOs and on-call playbooks for the post-migration surface — one production incident in six months; Playwright/Appium matrices raised coverage **45%** → **90%** and cut regressions **65%**.
- Delivered Emirates NBD interbanking API integrations under PCI-DSS / ISO 27001; Angular used only for secure operator dashboards.

Tech: Rust · Axum · Tokio · Node.js · MongoDB · Playwright · Appium · Finacle · Angular

Software Engineer

Mar 2023 – Nov 2023

Egen Solutions Inc · Remote

- Productionized a RAG pipeline (GPT-3.5) that generated Playwright tests from Selenium sources, collapsing a **12-month** migration to **3 months** and unblocking launch.
- Architected Apollo GraphQL federation across loan origination, payments, and customer services on Bridgecrest — **35%** fewer API round-trips; event-driven handlers for payment/state transitions.
- Owned AWS + GitHub Actions release trains with automated rollback; led 3 engineers on standards, CI gates, and delivery.

Tech: TypeScript · NestJS · Apollo GraphQL · AWS · GitHub Actions · Dynatrace · GPT-3.5 · Playwright · Angular · Ionic

Software Engineer

Sep 2020 – Jan 2023

Segment Hub Technologies · Mumbai

- Replaced a Node.js bottleneck with a Rust (Axum) API layer: **60%** lower server cost, **10,000+** concurrent connections, sub-50ms responses; introduced queue-backed async jobs for heavy document workloads.
- Shipped the company's first GPT-3 “talk to your docs” product surface — **25%** fewer support tickets, faster onboarding.
- Extended the product to Android/iOS via Ionic/Capacitor (**40%** mobile user growth) as a secondary client on the same APIs.

Tech: Rust · Axum · PostgreSQL · NestJS · AWS · GPT-3 · Ionic · Capacitor

Software Engineer

Jan 2018 – Aug 2020

Pawzeeble · Mumbai

- Redesigned geospatial “nearest clinic” from brute-force Postgres to PostGIS + K-d tree indexing — **10x** compute cost reduction at full accuracy; removed need for a dedicated geo-service.
- Built event-driven notification and booking flows with durable queues so clinic matching stayed responsive under load.
- Shipped Android, iOS, and web from one Ionic/Capacitor codebase (**60%** less maintenance vs native forks); LaTeX-capable clinical editor for in-browser report authoring.

Tech: TypeScript · NestJS · Koa · PostgreSQL · PostGIS · Angular · Ionic · Capacitor

Education

Bachelor of Engineering, Computer Science

2016 – 2020

Rizvi College of Engineering, Mumbai
